

Portainer Console geht nicht

Wenn man in Portainer nicht auf die Konsole eines Containers gelangt, könnte es sein, dass im NGINX Proxy Manager der Haken bei Websockets fehlt:

The screenshot shows the 'Edit Proxy Host' configuration interface. The 'Domain Names' field contains 'portainer[REDACTED]'. The 'Scheme' is 'https', the 'Forward Hostname / IP' is 'fr[REDACTED]', and the 'Forward Port' is '9443'. There are three toggle switches: 'Cache Assets' (checked), 'Block Common Exploits' (checked), and 'Websockets Support' (unchecked, highlighted with a red circle). The 'Access List' is set to 'Publicly Accessible'. At the bottom, there are 'Cancel' and 'Save' buttons.

Haken setzen, danach sollte es klappen.
